Northern Stone Supply, Inc.
Quarry Reclamation Plan
For Public Notice

1. Site Cleanup
Removal of any materials not native to the geographic area.

2. Infrastructure Removal
Removal of any infrastructure including: Breakrooms, shipping containers used for storage, capping of wells on the specific quarry site.

3. Site Safety
According to MSHA regulations, berms shall be placed in front of the steeply-sloped face of the mountain, and around the edge of the terrace. Signs will be posted to warn of unmaintained roadways ahead.

4. Reclamation of Site
Reclamation of Northern Stone Supply quarry pits will strive to restore the site to its original vegetation and water-drainage patterns.

5. Ecosystem Restoration
Vegetation will be allowed to re-grow naturally. Closed quarry sites will be sloped so that storm water may drain off of the terrace and down the mountainside in a regular pattern. Gaps in berms will be made as needed to allow this to happen.

6. Site Monitoring
An annual check by the quarry manager will report the progress of vegetation growth, drainage patterns and any other unusual developments.

Public comments or suggestions on the quarry reclamation plan may be emailed to info@northernstonesupply.com
